SPIRITUAL STRENGTH FOR TODAY

GOD SAVE THE QUEEN

The children of Israel asked for a king. Samuel, under divine direction, sought out Saul and anointed him. Then he called the people together to Mizpah. Lots were cast and Saul was chosen. Samuel presented him to the people, saying: "See ye him whom the Lord hath chosen, that there is none like him among all the people?" And all the people shouted, and said, "God save the king."

The Authorized Version states in the margin that the meaning of the Hebrew is "Let the king live."

The Revised Standard Version translates it as, "Long live the king." It is a very proper petition for monarchs are often in danger.

Hulal said to Abimelech, "God save the king, God save the king," even when he was plotting his overthrow. When Hulal was crowned at the age of seven, the rulers and guests clapped their hands and said, "God save the king." Already God's protection of his life had been evident. His father, King Abimelech, was slain in battle. Many of his kinsmen were slain by him. The wicked mother of Abimelech desired to slay the rest of the royal seed and take the throne for herself. An aunt rescued one-year-old Josiah and he and his nurse were hid in the house of the Lord. For six years until the day he was crowned, if Josiah had not lived God's promise to David would have been broken. God had said, "Thine house and thy kingdom shall be established forever." The line from David to Jesus was kept intact.

Many monarchs have fallen in the last 50 years but ours has remained. For this stability we are thankful. The character of our rulers has contributed to it. The late Queen Victoria said that if Jesus should return she would count it an honor to lay her crown at His feet.

John in his vision heard great voices in heaven, saying, "The kingdom of the world has become the kingdom of our Lord and of his Christ, and he shall reign for ever and ever." Revelation 11:15.

I am proud to be a Canadian and honor Her Majesty, The Queen. But I count it a greater honour to own Jesus Christ as Saviour and Lord of my life and to be a citizen of His everlasting Kingdom. To him I pledge my complete allegiance. This does not make me less a Canadian. Rather it makes me a better Canadian. This happy relation to the King of Kings and Lord of Lords has come about by His grace. He died for us all. He arose from the dead. Of His kingdom there shall be no end.

Sitting pretty

A baby sitter can usually find plenty of work, if she does a good job at a children's garden. A little preparation for this work is worthwhile. A course in home nursing, under St. John Ambulance, will teach her a great deal about the care and feeding of infants. A course in first aid will also train her to know what to do in case of accident or sudden illness. Most children like to have stories told or read to them. A short time at the public library will give her an idea of the stories suited to the various ages. Such bits of knowledge as the local phone numbers of police and fire departments, the number where the parents may be reached, and the number of the baby doctor, in case of real emergency, would be useful if need arose.

\$150 MILLION OUTGO
Apart from the import of foreign goods, Canadians spend about \$150 million a year more in visiting foreign countries than visiting visitors spend in Canada.

From Sea to Sea... Trans-Canada Highway

The problem of uniting a sprawling, sparsely populated country, stretching for over 3000 miles from the Atlantic to the Pacific, with a system of high quality roadways has been pondered and planned since Confederation. Today, target date for completion of the Trans-Canada Highway is approaching and Canada's provinces are pushing ahead to meet the 1960 deadline. Above, part of the highway in Banff National Park, Alberta, with snowing Mount Eisenhower as a backdrop.

The Trans-Canada Highway will provide North American motorists with some of the finest scenic touring routes in the world. Canada's highway planners firmly adhere to the principle that good roads don't cost money — they make money. They do this in a wide variety of ways — such as attracting larger numbers of tourists.

The Canso Causeway forms a spectacular link between Cape Breton Island and the Nova Scotian mainland. Completed in 1951 as a special joint Federal-Provincial project, the Causeway has since been incorporated into the Trans-Canada Highway. Under the Trans-Canada Highway Act, cost of building the highway has been shared by the Federal government and the provinces.

Eastern terminal of the Trans-Canada Highway will be in the historic city of St. John's, Newfoundland. A view of the busy port and magnificent harbour are seen above from the height of Signal Hill. Car ferries will link the island with the route through the mainland.

PRINT SHOP

One of Canada's largest print shops, the federal government printing bureau, employed 1,870 workers in 1958.

DRIVE-IN

Everything is "drive-in" nowadays. We have drive-in banks, drive-in theatres—everything, that is—but, alcohol.

Arrangements made for scrap metal purchases

Saskatchewan residents can now sell scrap metal accumulated on their property for cash.

An agreement which will see Wheat Pool elevator agents throughout the province act as scrap metal buyers has been reached between the Interprovincial Steel Corporation Ltd. and the Saskatchewan Wheat Pool. Under the agreement, all Saskatchewan Wheat Pool elevator agents will be empowered to pay for all scrap metal delivered to their elevators. The metal will be shipped to the IPSCO plant in Regina.

The new steel plant, which is scheduled to go into production in January, 1960, will use the scrap metal in the production of steel products. The purchase of scrap metal from points throughout Saskatchewan by IPSCO is expected to pay close to \$1,500,000 annually into the Saskatchewan economy, much of the money distributed in smaller centres.

The agreement came as the result of negotiations between E. W. Sharp, President of Interprovincial Steel, and the management of the Country Elevator Division of the Saskatchewan Wheat Pool.

The happiest people are those who are too busy to notice.

Catch-all pockets

7289

by Alice Brooks

Handy helper for spring house cleaning—this neat fabric strap that won't slip, catch-all pockets.

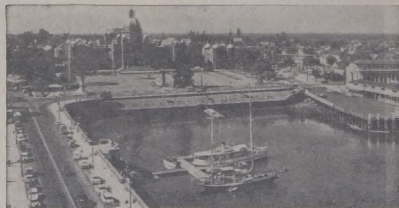

Money-saver apron — use any remnants of prints or plaid or plain fabric. It's easy sewing, inexpensive, too. Pattern 7288: directions, cutting chart.

Send thirty-five cents in coins (stamps cannot be accepted) to: This pattern, Free! (only) Send. Address, pattern number and size.

Household Arts Department, Department P.E., 60 Front Street, W., Toronto.

Total distance of the Trans-Canada Highway will be approximately 4,500 miles. This does not include some 400 miles of paved highways of good quality in Quebec.

National Film Board of Canada Photos.

The sunny harbour of Victoria on Vancouver Island forms the western terminal of the highway. Construction of the highway through the rugged terrain of the Rocky Mountains provided many challenging problems for Canada's highway builders. Route through the Rockies, some of it at a cost of \$15 million a mile, will afford travellers an endless vista of breath-taking sights.

National Energy Board to be formed

Mr. S. Douglas Turner, Acting General Manager of the Canadian Petroleum Association, said that the proclamation of Bill C-49, now known as the National Energy Board Act, is very gratifying because it is the expression of development phases of the Canadian petroleum industry.

Mr. Turner said, "The measure underwent painstaking examination by the House of Commons and the Senate. It is our hope that the implementation of the bill will greatly assist in furthering the optimistic growth of the industry whose healthy competition has been a prime factor in the development of the oil and gas industry in Canada."

"The Government has stated that a National Energy Board will be formed and made operative with all possible speed. Although the creation of the Board does not automatically spell an end to our work as the Canadian Petroleum Association, the enactment of a firm federal gas policy, coupled with the existing operation of the western provincial Oil and Gas Conservation Boards, is warmly welcomed by the petroleum industry in Canada."

Second 'yak' born in Ottawa

—SECOND OF THE NORTH.
Yellowknife, N.W.T.
Another yak has been born in Ottawa.

Jennie, the same silver muzzled animal that produced the first Canada-born yak last year, has given birth to her second baby. Another black buffer calf. The yak is still to be weighed and measured.

The event boasts Ottawa's total population to five. Jennie, owned by Frank and her two young, and Metilda, a cow that has been unproductive for years.

Yaks are Central Asian domestic animals that produce food, clothing, hides and skins. Three of the beasts were imported by the Northern Affairs Department in January of last year. The yearling was born in June, 1958.

The experimental herd is being kept on a farm just outside Ottawa. After the herd has been built up, the animals will be shipped to the Arctic for the next stage of the experiment aimed at providing a new source of food for northern residents.

OUTDOOR TIE PARTY

When a baby is put out of doors in his carriage, he should be so placed that direct sun does not shine into his eyes, nor should reflection show off from a white pointed wall. He should not over the carriage will help to keep out penetrating heatwaves or any of the stinging variations.

Applauded by all

Research leads attack on rheumatic fever

By ARNOLD JOHNSON, M.D.
(Asst. Professor, Dept. Pediatrics, McGill University, Montreal)

Rheumatic fever is a serious disease because of its potential power to damage the heart. Together with abnormalities affecting the arteries to the heart muscle, high blood pressure and the heart malformations present at birth, rheumatic fever is one of the "big four" in causing heart trouble. In children it is among the leading causes of death between the ages of five and 15 years. It is noteworthy that almost all rheumatic

heart disease of adult life was acquired in childhood.

Rheumatic fever shows itself in a variety of ways such as St. Vitus' dance (chorea); more commonly as a painful swelling of the joints from joint to joint; or its most serious form is attacked by severe heart failure. Many children with acute rheumatic fever escape entirely from heart damage, but the heart is affected to some degree in more than half of them.

Adequate treatment of an attack of rheumatic fever can prevent the heart damage of a period of bed rest continued until all evidence of the attack process has disappeared. It is not possible to predict in an individual case how long this may last, whether three months, six months, or longer. But it is of great importance in preventing heart damage or keeping it to a minimum that activities should not be resumed too soon. However, once activity is again permitted the majority of children return to their normal routine of school and play.

Frequently, it is not possible to provide adequate care in the home for prolonged periods in bed and some centres have rheumatic fever units where children may receive all the necessary medical care but also the social, educational and occupational therapy and physiotherapy and have daily school work from qualified teachers.

An outstanding characteristic of this illness is its tendency to recur in an individual so affected, though a person may play host to this disease for many months or even five times, but only does this lead to a series of long periods of inactivity, but also subsequent attacks increase the hazards of damage to the heart damaged or of increasing damage already present.

Whereas the involvement of the first two may cause concern at the onset of the illness, the larger problem is concerned with the future of those children in whom there is valvular damage. An affected valve may be narrower than normal and the heart has to pump blood in the reverse direction. Furthermore, the valve may be present without having to function as a valve. In some instances, young men and women in their twenties and thirties in the midst of heavy careers reach a point at which the valvular damage is sufficiently serious to restrict their normal activities.

One of the most serious chapters of heart surgery has begun in the last few years. It is a new chapter to widen the narrowed valve in many of these adults and to return them to normal health and activity. Although the results are promising, a great deal of work is still to be done.

A. J. Mahon also joined Canada's first heart team in 1933, and served with the Royal Canadian Horse Artillery in World War I. After service in Saskatoon, Regina and Vancouver, he was appointed general agent in Seattle in 1941, and the assistant general passenger agent at Vancouver. He was appointed general passenger agent at Winnipeg in 1946, and general passenger agent, Montreal, in 1952.

Luxury for linen

Transform your bedroom into a delightful retreat with these elegant, easy-to-embrace motifs.

Dainty sprays and pretty flowers—a springtime touch for pillows, towels, and bed linens.

NEW JOBS

A survey of the city of St. John's, Nfld., shows that there have been 100 new jobs in the city. The survey was conducted by the city of St. John's.

EASTWARD STRETCH

Except for Newfoundland, Canada's most easterly province, Quebec, along the north shore of the St. Lawrence, Quebec extends nearly as far east as the city of St. John's, Newfoundland.

(These are not necessarily the views of the editor of this paper)

A great store of resources

(The Canadian Champion, Milton, Ont.)

Canada has a great store of natural resources. It is a treasury of material things to be turned into useful products by our skill and energy. Canada is a country of new frontiers, new developments—a country destined for a place of leadership in the councils of nations.

Canada has a fair share of the world's 5,000 million acres of forests. It has been estimated that about 44 per cent of the land area of Canada is covered by forest growth. We have according to Canada Year Book, 1952, 600 square miles of commercially productive forest.

Having reached her western limits in wheat and having embarked on hullet use of her timber, Canada is now rolling back her northern frontier in search of minerals. Today, Canada is the chief world producer of nickel, the platinum metals, and cobalt. It ranks second in the production of uranium, third in silver, molybdenum and barite and fourth in copper and lead.

Agriculture is of course, Canada's leading primary industry, providing raw materials for many manufacturers. At the time of the last census, 20 per cent of Canada's people lived on land now used for agriculture. Only Canada change from a land of sickles and scythes to one of threshing machines, trucks and tractors.

Fishing was probably the first industry carried on by Europeans in the New World. Long ago these intrepid adventurers caught their fish off Newfoundland and the Maritimes, cured or dried them and sailed back to sell them in Europe. Today two of the four great sea-fishing areas of the world border on the east and west coasts of Canada.

Water flow has been an important natural resource in Canada from the time the first settlers set up their water mills to grind grain. Canadians are now the second largest per capita consumers of electricity in the world.

This editorial has covered the boundless material resources of Canada, but for most important of all, the human resources of the country. Canadians have a freedom to develop accompanied by a responsibility to preserve.

Canada has risen to her present position of influence and prestige through the enterprise and character of her people and their success in using intelligently her resources she has provided.

Our big empty land

(The Gazette, Grand Forks, B.C.)

We had an interesting discussion recently with a person now living in this country who had come from overseas to make his home here.

One thing he could not understand about this country was that we did not bring in many people and start to fill it up," he asked.

To anyone who has lived in the crowded conditions of Europe, let alone other nations such as France, it is a must find question often on their lips when they look at the vast empty reaches of Canada.

Indeed why not in other people's? Well, it will mean unemployment, counter some—this in spite of the fact that while there are many still looking for work, there are thousands more unemployed, as our population grows.

It will mean cheap labor for the factories and lower our wages so others who have yet to come will be able to get the wages of workers, and today there are many jobs, manual and skilled, but still jobs, that go wanting because no one wants them.

It will lower our standard of living, others comment. Yes, it may—slightly and temporarily. But we must soon realize that we must either lower our standards slightly for a while—or they are going to be lowered for us for poverty-stricken nations will not always sit idly by and wait for their wealthy cousins across the sea. Competition is going to be rough and tough for some time to come—and this is one way to forestall it.

Increased immigration will mean more people to buy the goods produced in Canada, more people to manufacture goods for sale here and abroad. It will mean more people in Canada—more people to open up our isolated but rich in resources areas of the north.

Immigration will not solve all the problems—and it will probably create some new ones. But from the standpoint of what is right in today's world—the underdeveloped immigration is one of the proper courses to follow. It can help not only Canada, but the world.
